SPRING FRUITS

Spring arrives, the first sunbeam and a nature's phenomenon Worthy of being contemplated: flowering.

Spring is the color's season!

Gently, the winter citrus fruits (oranges and tangerines) are giving way to strawberries and strawberries, which are one of the fruits that contains more vitamin C and that will give us company throughout the spring.

The first plums that will reach their apogee in later life are already shy. There are reds, yellows and claws style, and they are an important source of fiber regulating intestinal transit, rich in potassium and with a high antioxidant power.

In March the senses wake up after the cold winter: colors, smells, flavors and many outdoor activities.

It's time to enjoy gastronomic events and stroll through the markets of our towns and cities discovering new products

and admiring the colors of the fields of lavender, poppies and sunflowers ..

It is recommended to savor the typical fruits of spring that last a short time but that provide us with a high content of vitamins and minerals: strawberries and strawberries, plums, medlars, apricots, lemons and cherries.

Prepare your senses, your camera and enjoy spring in our land!
